Profile Summary

MSc Data Science graduate (Rank 1, SGPI 9.27) skilled in Python, SQL, Power BI, and Advanced Excel, with three end-to-end analytics projects spanning BFSI, retail, and supply chain domains. Built a two-model churn prediction system quantifying *Rs.2.29* Crore in annual revenue at risk, and a live BigQuery/dbt analytics platform with an AI query assistant across a 10-store retail network.

Skills

Programming & Querying: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, R

Data Engineering & Analytics: ETL Pipelines, Data Wrangling, Data Cleaning, Exploratory Data Analysis (EDA), Feature Engineering, Business Analytics

Data Visualization Tools: Power BI, Tableau, MS Excel (Pivot Tables, VLOOKUP, XLOOKUP, Conditional Formatting)

Tools & Technologies: SQLite, SQLAlchemy, Jupyter Notebook, Google Colab, VS Code, Streamlit, Git, GitHub, Scikit-learn, Google BigQuery

Domain Knowledge: BFSI Analytics, Customer Analytics, Retail Analytics, Supply Chain Analytics, E-Commerce Analytics

Professional Skills: Analytical Problem Solving, Collaboration, Dashboard Design, KPI Reporting, Stakeholder Communication, Data-Driven Decision Support, Data Storytelling

Projects

RetailIQ – Supply Chain Analytics & AI Decision Platform | *Python, BigQuery, dbt, Tableau, LLM*

GitHub

- Modeled 91,690 transactions across 10 stores into governed BigQuery tables using dbt Core, powering a 5-report Tableau executive dashboard.
- Developed a natural-language AI assistant (Groq LLaMA 3.3) that converts plain-English business questions into verified SQL queries, cutting ad-hoc analysis turnaround from days to seconds.
- Caught and resolved a 10x revenue overstatement (*Rs.23.3* Cr reported vs. *Rs.2.33* Cr actual) traced to a stale materialized view, before it reached a reporting stage.
- Surfaced 70 understocked SKUs and a ~4x regional revenue gap (West vs. East), directly informing inventory and expansion priorities.

NeoTrust Bank – Customer Churn Prediction & Retention Revenue Calculator | *Python, SQL, scikit-learn, Power BI*

GitHub

- Engineered an ETL pipeline merging 3 raw BFSI data sources (156K+ records) with deliberate real-world messiness (duplicate IDs, inconsistent formats, mismatched keys).
- Designed a two-model architecture (Behavioral Trigger + Early Warning Demographic) to eliminate label leakage from a recency-based churn definition, achieving an honest 0.675 AUC on the primary classifier.
- Quantified *Rs.2.29* Crore in annual revenue at risk across 6,001 customers, with a scenario-based ROI model showing 920% return at a conservative 20% retention rate.
- Built a 3-page executive Power BI dashboard translating model output into a real-time SQL-based retention alert system.

Vendor Performance Analysis | *Python, SQL, Power BI*

GitHub

- Developed an automated ETL pipeline (Python, SQLAlchemy, SQLite) to ingest and clean multi-source retail data covering sales, purchases, inventory, and vendor invoices.
- Applied Pareto analysis and two-sample hypothesis testing (t-test, $p < 0.0001$) to separate high-margin from high-volume vendor segments.
- Identified that the top 10 vendors accounted for 65.7% of total purchases, exposing a concentration risk in vendor dependency.
- Delivered an interactive Power BI dashboard driving 5 data-backed recommendations, including diversification strategy and a \$2.71M unsold inventory flag.

Achievements & Publications

- Research Preprint, SSRN (Elsevier) & Zenodo (CERN), 2026.** – "Evaluating Explanation Styles in E-Commerce Recommendation Systems: A Comparative Study of User Trust and Understanding." Research preprint authored, and archived on SSRN (Elsevier) and Zenodo (CERN open-access repository). SSRN ID: 6556378 — DOI:10.5281/zenodo.19495867

Education

M.Sc. Data Science	2024 – 2026
<i>SIES College of Arts, Commerce and Science, Mumbai</i>	<i>SGPI: 9.27 / 10 — 1st Rank</i>
B.Sc. Physics	2020 – 2023
<i>Maharashtra College of Arts, Commerce and Science, Mumbai</i>	<i>CGPI: 7.51 / 10</i>

Certifications

Coursera — Google Data Analytics: Foundations – Data, Data, Everywhere

Simplilearn — Introduction to MS Excel

Foslipy Consulting Pvt Ltd — Data Analyst Trainee Program (3 months)
